

Final Project

Goal

You will make a database for a small business.

Set-up

Decide what types of products your business will sell. It might be goods, or it could be services.

Your Database will be used to take orders from customers. Each Order is a record with the following fields:

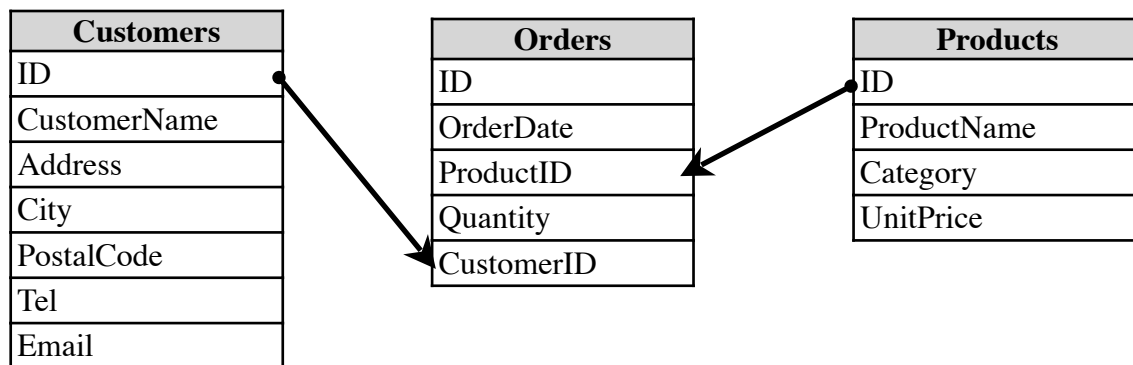

- the DATE of the Order
- the PRODUCT that was bought
- the QUANTITY (“how many”) that was bought
- the CUSTOMER that made the Order

Making the Database

Your Database will need the following tables:

- Customers
- Products
- Orders

These tables should be connected like this:

To do

Your goal is to:

- make tables for the data (Products, Orders)
- make forms to input and view the data
- enter sample data to test the database
- create a query to show the orders made
- create a form with a subform to show the orders made by each customer
- create a query to show much of each product was ordered
